Hi Gary,

I was working on an email when I got your response.

We can definitively prove there is no hexachlorobenzene in either sample. We can prove there is no chlordane in Sx 1411006-02 (FT506). We are going to do an additional cleanup on sample 1411006-01 (FT1004) for chlordane to try to remove phenolic interferences which are too high (would result in a reporting limit about 10X too high). As for DNT (per our previous emails), the presence/absence is masked by the oil on a GC-MS (single quad). We will have to rerun the extracts using our GC-QQQ next week. If GC-QQQ doesn't provide us an answer, we can try our nitrogen phosphorous detector or some additional cleanups.

So we can knock out some codes for you and I still have hope to knock out more. Will let you know next week as soon as we know something.

Have a great weekend.

Subject: CES: Sample Status

Christy/Diane:

Can you give me a status of the samples that I sent to you guys?

Thanks for your help.
